1 Project: Investigate TMDb Movies Data

1.1 Table of Contents

Introduction
Data Wrangling
Exploratory Data Analysis
Conclusions
Introduction

In this analysis we are going to investigate TMDb movies database. The database contains all movies data from 1960 to 2015 and has specific details about every movie such as title, budget, revenue, year of release, runtime and generes.

We will investigate the database to find out the top 5 years of highest average spending on film production and the movies most spent on in these years. Also, we will explore the movies with the heighest revenues of all time and the relation between those movies budgets and revenue.

```
In [78]: #importing all needed packages for the analysis
    import numpy as np
    import pandas as pd
    import matplotlib.pyplot as plt
    % matplotlib inline

## Data Wrangling > In this section we will do the following
load the TMdb database file

<explore database header, first and last few rows</li>
    <firding columns information such as the column data type and the mean of its values</li>
    <counting duplicates and empty rows</li>
    ### General Properties

In [79]: #reading the TMDb database file tmdb-movies.csv
```

df = pd.read_csv('tmdb-movies.csv')

df.head()

#checking the data header and first few rows

```
Out[79]:
                id
                       imdb_id popularity
                                                budget
                                                            revenue

1.1.1 Data Cleaning

In our data cleaning we will drop and trim parts of the data we won't be using in our analysis

dropping all columns we won't use in our analysis

trimming duplicated rows as it won't help in giving us better results

making sure that movies with no or zero budget or revenue is not under one category by using histograms

dropping rows that has no data about movie budget or revenue so it doens't mess our analysis

checking that the data is clean and no more errors before starting the analysis

```

Exploratory Data Analysis

In this section: We will use the cleaned data from the previous section and build our analysis using data visualization to build plots to compare between movies budgets through the years. Also, we will find top movies with highest revenues of all time and compare the relation between its budget and revenue statiscs.

1.1.2 What are the highest years in average spending on film production? and which movies most spent on in the top 5 years?

```
In [99]: #building the data using a line curve for better overview about the up and down time per
budget_data.plot()
    #setting plot name
    plt.title('Average Spending on Film Production')
    #naming y and x lables
    plt.ylabel('Average Budget (10 millions)')
    plt.xlabel('Release Year')
Out[99]: Text(0.5,0,'Release Year')
```

```

Conclusions

From Our Analysis We found that the highest average years of spending on film production are 1963, 1965, 1997,1998 and 2000 and each movie budget starting from 57 million dollars in years 1998 and 2000 also, reached a maximum point in 1963 with 81 million dollars budget and an average budget of all times of 39.9 million dollars.

highest budget movies

in 1963: Cleopatra

in 1965: The Greatest Story Ever Told

in 1997: Titanic

in 1998: Armageddon, Lethal Weapon 4

in 2000: Dinosaur

highest revenues movies of all time

Avatar: 2.82 billions dollars in 2009 with 7.1 average rate Star Wars: 2.78 billions dollars in 1977 with 7.9 verage rate Titanic: 2.5 billions dollars in 1997 with 7.3 average rate

The Exorcist: 2.16 billions dollars in 1973 with 7.2 average rate

Jaws: 1.9 billions dollars in 1975 with 7.3 average rate

From the 'Relation between Movies Budgets and Revenue' histogram:

higher budget value doesn't mean always a higher revenue.

Although, the Star Wars movie has less than half of the Titanic budget, the Star Wars got much higher revenue than Titanic

Avatar's budget is 240 millions which is much higher than Star Wars that has budget of only 39 millions even though Star Wars got nearly the same revenue of 2.8 billion dollars as Avatar.
